## **DETAILED ACTION**

### ***Claim Rejections - 35 USC § 112***

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

1. Claims 1-19 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claim 1 recites the limitation "the needle" in line 2. There is insufficient antecedent basis for this limitation in the claim.

Claim 1 recites the limitation "the adapter" in lines 2-3 and line 17. There is insufficient antecedent basis for this limitation in the claim.

### ***Claim Objections***

2. Claims 6-19 are objected to under 37 CFR 1.75(c) as being in improper form because a multiple dependent claim cannot depend from any other multiple dependent claim. See MPEP § 608.01(n). Accordingly, the claims have not been further treated on the merits.

### ***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 1-5 are rejected under 35 U.S.C. 102(b) as being anticipated by Baldwin (US 3,848,593).

Art Unit: 3767

Baldwin discloses a syringe accessory having a semi-tubular body (11) and comprising a first holding means comprising a distal transverse wall (21) with a hole (21a) for the passage of a needle (73); a conical adapter (75) connecting the needle to the syringe (61); a second holding means comprising a bearing zone (55) against which the syringe is intended to bear; and teeth (Figures 2 and 4) arranged around the hole which provide anti-rotation means for preventing the adapter from rotation with respect to the body.
